

eZ Components – A technical view

Tobias Schlitt <ts@ez.no>

eZ Conference 2008

About me

- Tobias Schlitt <toby@php.net>
- Qualified IT Specialist
- Studying CS at the TU Dortmund
- PHP since more than 7 years
- Open Source addicted and active
 - eZ Components
 - PEAR (currently inactive)
 - PHP / PHP projects in general

Agenda

- The basics
- Example show
- Q/A
 - Discussion
 - Open part

The basics - Agenda

- Release info
- Target
- Project goals
- Setup
- Licensing / contributing

Release info

- Current stable: 2008.1
 - Hot! Out since Monday!
- Next: 2008.2
 - Around Christmas
 - Many additions to existing packages

Project target

- Migration to PHP 5.X (5.1.1)
- Thoroughly plan to get a top notch API
- Test driven development approach
- Proper docs from the start
- Flexibility and openness for the future

Project goals

- Solid platform for PHP application development
- Not a framework (don't force a structure)
- Clean and simple API
- Excellent docs
- Clean IP
- Open Source friendly

Setup 1/2

- Retrieval
 - PEAR
 - pear channel-discover components.ez.no
 - pear install ezc/eZComponents
 - SVN checkout
 - svn co http://svn.ez.no/svn/ezcomponents/trunk
 - svn co http://svn.ez.no/svn/ezcomponents/scripts
 - cd trunk && ./scripts/setup-env.sh
 - Download (<http://ez.no/ezcomponents/download>)

Setup 2/2

- Autoloading

```
require_once 'Base/src/base.php';
function __autoload( $className )
{
    ezcBase::autoload( $className );
}
```

- Bootstrapping

```
require_once 'Base/src/ezc_bootstrap.php';
```

Licensing / Contributing

- New BSD
 - Open Source
 - Very permissive
 - GPL compatible
- CLA
 - Needs to be signed to contribute
 - Guarantees clean IP rights

Components short overview

- Cache
- Document
- Graph
- Feed
- Search

Cache

- Multiple back-ends
 - File (serialize, var_export())
 - Memory (APC, Memcached)
- Hierarchical caching (2008.1)
 - Combine fast (small) and slow (large) caches
 - Think about CPU cachess

Cache example - simple

```
ezcCacheManager::createCache(  
    'content',  
    '/var/cache/content',  
    'ezcCacheStorageFileArray',  
    array(  
        'ttl' => 60*60*24*2,  
    )  
)  
  
// Somewhere else  
$cache = ezcCacheManager::getCache( 'content' );  
  
$id = 'some_unique_id';  
if ( ( $data = $cache->restore( $id, $attributes ) ) === false )  
{  
    $data = generateData();  
    $cache->store( $id, $data );  
}
```

Cache example - hierarchical

```
$stack = new ezcCacheStack( 'stack' );

$stack->pushStorage( // ezcCacheStorageFileArray
    new ezcCacheStackStorageConfiguration(
        'file', $fileStorage, 1000000, .5
    )
);

$stack->pushStorage( // ezcCacheStorageApcPlain
    new ezcCacheStackStorageConfiguration(
        'apc', $apcStorage, 1000, .3
    )
);

$stack->options->replacementStrategy =
    'ezcCacheStackLfuReplacementStrategy';

$stack->store( 'id_1', 'id_1_data' );
$data = $stack->restore( 'id_1' );
```

Document (2008.1)

- Parse different document formats
 - RST
- Output common document format:
 - DocBook
 - Shortcuts optional
- For 2008.2
 - Wiki Markup
 - XHTML

Document example

```
$rstFile  = dirname( __FILE__ ) . '/test.rst';
$htmlFile = dirname( __FILE__ ) . '/test.html';

$document = new ezcDocumentRst();
$document->loadFile( $rstFile );

$xhtml = $document->getAsXhtml();
$xml   = $xhtml->save();

file_put_contents( $htmlFile, $xml );
```

Graph

- Creates pretty data visualization
- Multiple chart types
 - Pie, line, bar, radar, odometer
- 2D or 3D rendering
- Multiple drivers
 - SVG, GD, Flash (Ming)
 - Cairo (2008.1)

Graph – Example (GD)

```
$graph = new ezcGraphPieChart();
$graph->palette = new ezcGraphPaletteEzBlue();
$graph->title = 'Access statistics';
$graph->legend = false;

$graph->driver = new ezcGraphGdDriver();
$graph->options->font = 'fonts/Vera.ttf';

$graph->data['Access statistics'] = new
ezcGraphDataSet( array(
    'Mozilla' => 19113,
    'Explorer' => 10917,
    'Opera' => 1464,
    'Safari' => 652,
    'Konqueror' => 474,
) );
```

Graph – Example (GD)

```
$graph->renderer = new ezcGraphRenderer3d();

$graph->renderer->options->pieChartGleam = .3;
$graph->renderer->options->pieChartGleamColor = '#FFFFFF';
$graph->renderer->options->pieChartShadowSize = 5;
$graph->renderer->options->pieChartShadowColor = '#000000';

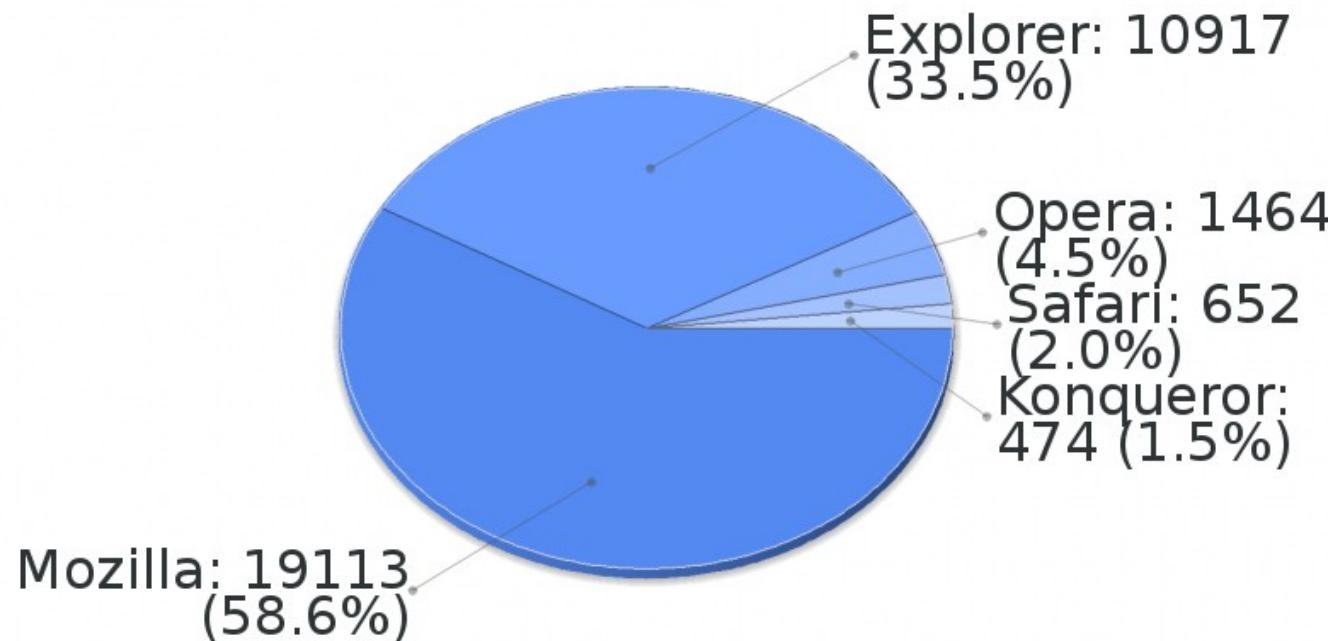

// ...

$graph->renderer->options->pieChartHeight = 5;
$graph->renderer->options->pieChartRotation = .8;

$graph->render( 800, 600, 'tutorial_driver_gd.png' );
```

Graph – Example (GD)

Access statistics

Graph – Example (Cairo)

```
$graph = new ezcGraphPieChart();

// ...

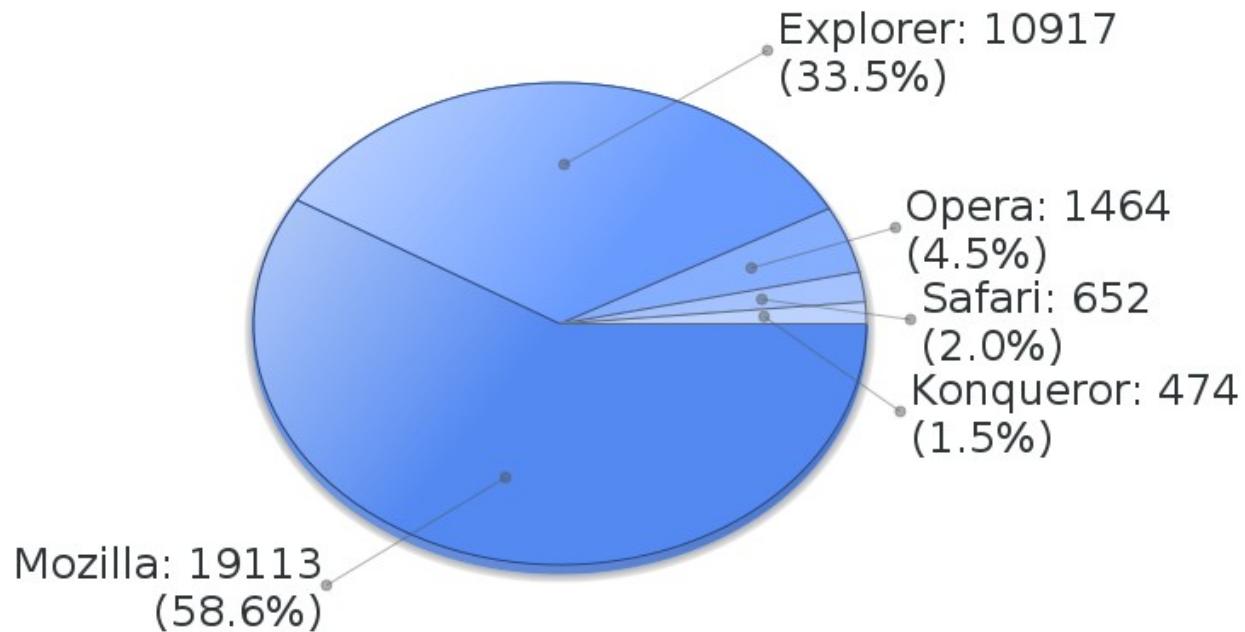

$graph->driver = new ezcGraphCairoDriver();

// ...

$graph->render( 800, 600, 'tutorial_driver_cairo.png' );
```

Graph – Example (Cairo)

Access statistics

Feed (2008.1)

- Parse and create feeds
- Multiple formats
 - RSS 1 / 2
 - Atom
- Module support
 - iTunes
 - CreativeCommons

Feed example - Create

```
$feed = new ezcFeed( 'rss2' );

$feed->title = 'Flight of the RC plane';
$feed->description = 'A podcast for fans of remote-control ...';

$author = $feed->add( 'author' );
$author->name = 'Captain Balu';
$author->email = 'captain.balu@example.com';

$link = $feed->add( 'link' );
$link->href = 'http://rcplanes.examples.com/';
```

Feed example – Add iTunes

```
$iTunes = $feed->addModule( 'iTunes' );  
  
$iTunes->keywords = 'RC planes,gadgets,flying';  
$iTunes->explicit = 'yes';  
$iTunes->subtitle = 'Competitions, tutorials and tips...';  
  
$image = $iTunes->add( 'image' );  
$image->link = 'http://rcplanes.example.com/images/plane.jpg';  
  
$category = $iTunes->add( 'category' );  
$category->text = 'Technology';  
  
$subCategory = $category->add( 'category' );  
$subCategory->text = 'Gadgets';
```

Feed example – Add items

```
$item = $feed->add( 'item' );

$item->title = 'Flying an RC plane indoors';
$item->description = 'In this episode, ...';
$item->published = 'Fri, 04 Jan 2008 11:18:34 +0100';

$author = $item->add( 'author' );
$author->name = 'Captain Balu';
$author->email = 'captain.balu@example.com';

$link = $item->add( 'link' );
$link->href = 'http://rcplanes.example.com/articles/...';

$enclosure = $item->add( 'enclosure' );
$enclosure->url = 'http://rcplanes.example.com/media/003.mp3';
$enclosure->length = 49099054;
$enclosure->type = 'audio/x-mp3';
```

Feed example – Add iTunes items

```
$iTunes = $item->addModule( 'iTunes' );  
  
$iTunes->duration = '29:20';  
$iTunes->keywords = 'RC planes,office,flying,enemies';  
  
// Generate the feed  
  
$xml = $feed->generate( 'rss2' );  
file_put_contents( 'feeds/news.xml' , $xml );
```

Search (2008.1)

- Unified access to search backends
- Currently implemented
 - Apache Solr
- Modelled after PersistentObject

Search example

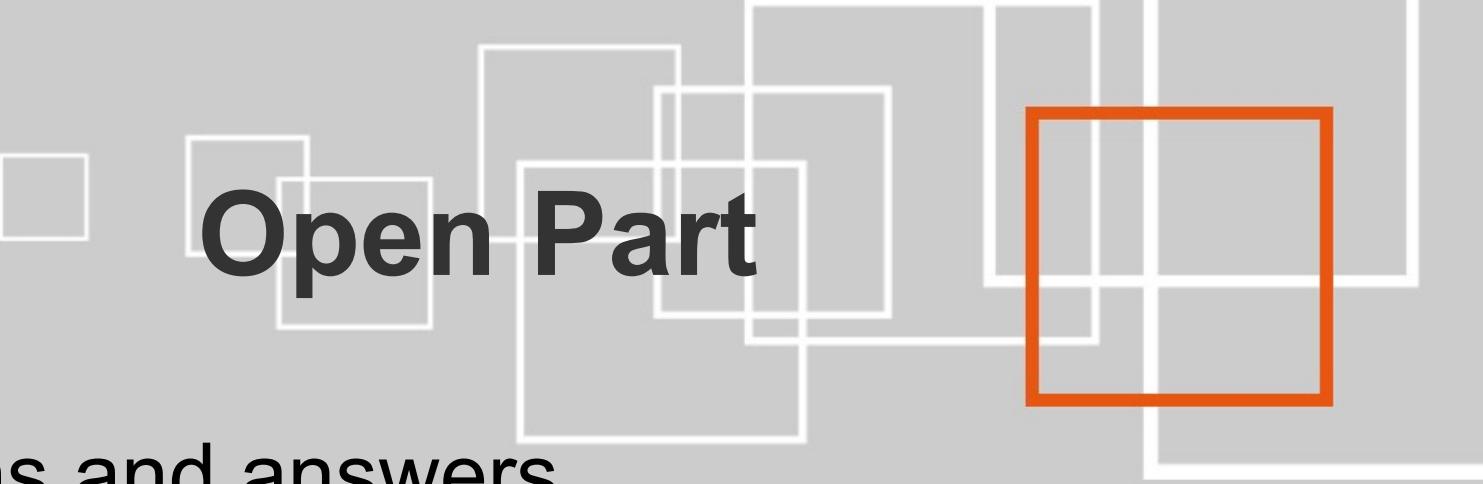

```
$solr = new ezcSearchSolrHandler;
$session = new ezcSearchSession(
    $solr, new ezcSearchEmbeddedManager()
);
$q = $session->createFindQuery( 'ezcSearchSimpleArticle' );
$searchWords = split( ' ', $searchWord );
foreach( $searchWords as $searchWord )
{
    $q->where(
        $q->lor(
            $q->eq( 'body', $searchWord ),
            $q->eq( 'title', $searchWord )
        )
    );
}
$q->limit( 10 );
$res = $session->find( $q );
```

Misc additions in 2008.1

- WorkflowSignalSlotTiein
- PersistentObject
 - Advanced datatype support
 - Multiple relations to the same object
- TemplateTranslationTiein

Outlook to 2008.2

- Document
 - More input / output formats
- PersistentObject
 - Pre-fetching of related objects
 - Identity mapping
- Webdav
 - Authentication + Locking (?)
- Development mode

Open Part

- Questions and answers
 - Critiques?
 - Ideas?
 - Contributions?
-
- If time left: Anything you would like to see?

The end

- Thanks for listening!
- I hope you enjoyed the talk
- Enjoy the rest of the conference
- Slides will be online
 - Watch: <http://blog.schlitt.info>
 - Further questions: Tobias Schlitt <ts@ez.no>
